

LIFT SOLUTIONS

**JACKS &
PUMP UNITS**

HYDRAULIC JACKS

That Always Meet the Highest Standards

We carry a complete line of jacks for hydraulic elevators.

We can quickly meet your project's requirements and lead times with a large inventory of parts to design and build your jacks to your exact specifications. We offer a wide range of in-ground jacks, holeless jacks, and telescoping jacks.

Multi-Piece Jacks

We offer multi-piece jacks for all of our applications. All multi-piece jacks come pressure tested at the factory and color-coded for easy installation in the field.

Pressurized PVC System

Our in-ground jacks come with a pressurized PVC system, featuring a pressurized evacuation system that permits the escape of any condensation.

DOM Tubing

Our jacks feature more precise tolerances and are polished to 1/1000 of an inch. This high quality construction creates a smooth and constant drive quality.

PUMP UNITS & JACKS

STURDY PUMP UNITS

Get dry and submersible elevator pump units that are built strong and reliable to withstand the harshest working environments.

Our dry and submersible pump units are sturdy units that continue to perform through the most rugged conditions. With solid construction, pre-testing before leaving the factory, and optional accessories, we fabricate the pump unit precisely to meet your project specifications.

JACK ADVANTAGES

- Customizable oil inlet
- Equipped with air bleeder & oil recuperator
- Threaded holes allow head bolts to be used as handles
- Equipped with two O-Rings
- ACME threads
- Slip Fit PVC System

PUMP UNIT ADVANTAGES

- Chambered muffler
- Oil sight gauge and thermometer
- Up to 600 Gallon Tanks
- Several optional accessories available
- Four bolt removal for easy access to pump and motor
- Right or left handed available

DURABLE PUMP UNITS

Built from 11-gauge steel

With dependable performance, our pump units are relied on throughout North America to get the job done.
