

LIFT SOLUTIONS

ELEVATOR PACKAGES

MULTIPLE PACKAGE CONFIGURATIONS

We carry a variety of elevator packages for traction, MRL and hydraulic applications.

Lift Solutions offers several different options for new construction and modernization elevator packages, including group 1 (running platform) packages, borehole, borehole cornerpost, twin jack holeless, twin jack roped hydraulic, low rise geared traction and other configurations.

MRL Packages

We offer MRL packages; Rail Supported or Building Supported. These packages utilize an efficient gearless machine that is installed inside the hoistway, eliminating the need for a machine room.

In-Ground Packages

The traditional application is less expensive than other packages. Easy to install for both low and high capacity applications, and great for freight applications.

Traction Packages

We offer traditional overhead geared traction machines, along with the controller and governor in the machine room. This design allows for a much higher speed capacity and unlimited travel range.
