

ELEVATORS & PARTS

## REEL CLOSERS

*Elevators & Parts' reel closers increase profits for both you and for building owners.*

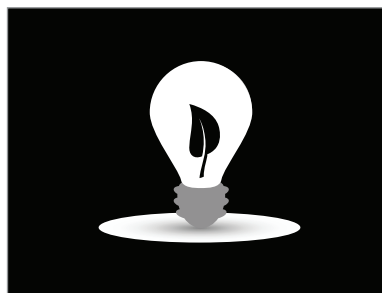

With a revolutionary design, all of our reel closers are able to overcome wind velocity as the elevator doors close. Each of our reel closers increase tension by up to 20% while also reducing the energy required to open hoistway doors. Even after over 1,000,000 cycles, our reel closers have been proven to hold their torque and tension.

## ADVANTAGES TO OUR REEL CLOSERS

### EASY INSTALLATION

Our door closers were designed to easily replace all existing closers with an affordable, safer and energy saving product. They are reasonably priced for both new and modernization projects.

### GREEN ENERGY PRODUCT

With 9.2% power savings per cycle, our reel closers are an energy saving product. These substantial energy savings allow for potential tax breaks and power rate adjustments for building owners.

### DURABLE

Molded from space-age plastics and with a conical helix shape, our reel closers withstand millions of door operation cycles, reducing safety concerns and maintenance costs.
